

'MAN FLU' MAY BE REAL

At Last Someone Is On Our Side Chaps - 'Man flu' may be real!

Are men wimps or do we just have weaker immune systems?

The much-debated phenomenon of "man flu" may have some basis in fact, suggests an article published in the Christmas issue of The BMJ. A Canadian academic investigated the claim of man flu, meaning a cold or similar minor ailment experienced by a man who is thought to be exaggerating the severity of the symptoms.

Despite the universally high incidence and prevalence of viral respiratory illnesses, no scientific review has examined whether the term man flu is appropriate or accurate.

So Dr Kyle Sue, a clinical assistant professor at Memorial University of Newfoundland in Canada, set out to determine whether men really experience worse symptoms than women and whether this could have any evolutionary basis. Dr Sue analysed relevant research and found some evidence that adult men have a higher risk of hospital admission and have higher rates of influenza associated deaths compared with women in the same age groups, regardless of underlying disease.

For many acute respiratory diseases, males are also more susceptible to complications and exhibit a higher mortality. And some evidence supports men suffering more from viral respiratory illness than women because they have a less robust immune system. Despite this evidence, Dr Sue says further higher quality research is needed to clarify other aspects of man flu "because it remains uncertain whether viral quantities, immune response, symptoms, and recovery time can be affected by environmental conditions."

Dr Sue concludes that the concept of man flu, as commonly defined, is potentially unjust. "Men may not be exaggerating symptoms but have weaker immune responses to viral respiratory viruses, leading to greater morbidity and mortality than seen in women," he writes. However, there may be an evolutionary benefit to a less robust immune system, he explains, as it has allowed men to invest their energy in other biological processes, such as growth, secondary sex characteristics, and reproduction."

There are benefits to energy conservation when ill, adds Sue. "Lying on the couch, not getting out of bed, or receiving assistance with activities of daily living could also be evolutionarily behaviours that protect against predators. Perhaps now is the time for male friendly spaces, equipped with enormous televisions and reclining chairs, to be set up where men can recover from the debilitating effects of man flu in safety and comfort."

Sounds like the perfect cure to me, but to help things along there are things that help. Two herbal supplements from the World-renowned company Schwabe Pharma will certainly ease the symptoms and speed your recovery. The ancient remedy of Echinacea brought scientifically up to date as EchinaCold and the extract of the African pelargonium as a syrup or tablets, Kaloba; good for the chesty symptoms.

A combination of Zinc and vitamin C are on of the very few treatments proved to shorten the duration of the common cold and the Alive! Men's Energy formula provides both, plus A and B vitamins as well as Magnesium.

Find all these in Health Stores, chemists and some supermarkets, or direct from <https://www.schwabepharma.co.uk/product-category/by-symptom/colds-immunity/>
